TECHNICAL SKILLS

Languages: Python, C++, C, Java, TypeScript, Bash, JavaScript, Kotlin, SQL, HTML/CSS

Frameworks & Tools: Linux, Git, Docker, Kubernetes, CI/CD, AWS, QNX, React, Node.js, Express, REST APIs

Data & ML: Spark, Hadoop, Azure Databricks, PostgreSQL, PyTorch, ONNX, TensorRT, XGBoost, TensorFlow Lite

EXPERIENCE

Data Engineer Intern

Scotiabank

May 2026 – Present

Toronto, ON

- Led **cross-cluster validation** of a **PySpark/JDBC ingestion framework** for a bank-wide **Databricks migration**, isolating **Spark, Hadoop, and Hive** configuration issues blocking rollout
- Resolved **30+ ETL pipeline failures** by building **Python** diagnostics and shell automation for high-volume distributed ingestion and batch-processing workflows
- Deployed a **Databricks SQL observability layer** across the internal data engineering team, surfacing **180+ batch failures** and classifying **100+ critical** and **80+ invalid-load events** to streamline triage of silent ingestion failures

Software Engineer Intern

Ericsson

May 2025 – May 2026

Ottawa, ON

- Re-architected an **AI crash analysis agent** into a **RAG system** using **30+ technical reports**; improved accuracy from **33% to 91%**, reducing debugging by **10+ hours** for **1,000+ engineers** across **North America** and **Sweden**
- Built a **RAG-based chatbot** for **Cloud RAN** documentation, benchmarking LLMs and retrieval strategies, and deployed it in an internal tool used by **20+ developers**
- Built **20+ unit tests** for **5G Layer 1 protocol handling**, achieving **100% coverage** and reducing CI regression risk

Software Engineer Intern

BlackBerry

May 2024 – Aug. 2024

Ottawa, ON

- Engineered a **C++ synthetic sensor** in the **BlackBerry IVY®** cloud to process vehicle telemetry, improving dog-safety detection accuracy by **40%**
- Trained and deployed a **TensorFlow Lite** model for seat-occupancy detection with **92% precision**, integrating inference into the Android application using **Kotlin**
- Refactored **GitLab CI/CD** pipelines using **YAML** and **Docker**, reducing failures by **30%** across **100+ builds**

PROJECTS

Praxis (1st Place Overall @ Hack the 6ix + Best Use of QNX) 🏆 | *Python, C++, QNX, FastAPI, React, llama.cpp*

- Built a portable **QNX/Pi 5 tracing pen** to quantify tremors and tracing accuracy from IMU and camera data
- Fine-tuned **Qwen3.5-4B with SFT and GRPO** to classify rehabilitation trends with **92% accuracy** across **38 unseen cases**

Trace (1st Place @ Tech-Nol-Hack 2025) 🏆 | *JavaScript, Node.js, Express, SQLite, Leaflet.js, OSRM, Render*

- Built a **risk-aware routing engine** with **quadratic proximity decay**, computing safer detours in **<200 ms**
- Implemented **anonymous incident clustering** (120 m jitter, 180 m radius), boosting report reliability by **45%**

Brick by Brick (Best Use of Snowflake API @ SheHacks 10) 🏆 | *Python, Snowflake, Gemini API, MongoDB Atlas, JS*

- Introduced a **stock-style housing model** where **multiple users buy equity shares** in **1,000+ Toronto homes**
- Used **Gemini** to **dynamically re-score risk** from user activity, syncing **MongoDB Atlas + Snowflake** in **<300 ms**

EDUCATION

Carleton University

Bachelor of Engineering (BEng) in Software Engineering, Co-operative Education

Sep. 2023 – Apr. 2028

cGPA: 10.71/12

- **Awards:** Dean's Honour List, President's Scholarship (\$12,000)
